Corrections to SPL's lecture Notes

(1) **Lecture 2**, pages 25 and 26.

On page 25

$H_{ac} = H_{bd} = 520\ A/m$, and not $450\ A/m$ (as seen from the B-H curve)

$Ni = \sum H_i l_i = 2(520\text{x}0.35) + 2(100\text{x}0.4) = 1164\ At$

On page 26,

$i = \frac{\sum H_i l_i}{N} = \frac{1164}{310} = 3.7548\ A$

(2) **Lecture 3**, page 21

$L = \frac{d\lambda}{di}$, and not $L = \frac{d\lambda}{dt}$.
