NANYANG TECHNOLOGICAL UNIVERSITY

SEMESTER 1 EXAMINATION 2025-2026

IE2106 – ENGINEERING MATHEMATICS I

November / December 2025 Time Allowed: 2 hours

INSTRUCTIONS

1. This paper contains 4 questions and comprises 12 pages.
2. Answer all 4 questions.
3. All questions carry equal marks.
4. This is a closed book examination.
5. Unless specifically stated, all symbols have their usual meanings.
6. A list of useful formulae is given in Appendix A on pages 4-5, followed by Statistical Tables on pages 6-10, and the Laplace Transform Table on pages 11-12.

---

1. (a) The papayas sold in the supermarket are known to have a mean weight of 1.2 kg and a standard deviation of 0.4 kg.

   (i) Mary goes to the supermarket to buy a papaya. Assuming that the weights of papayas are normally distributed, what is the probability that the weight of the papaya bought is between 1.0 kg and 1.4 kg?

   (ii) Mary randomly chooses 5 papayas from the rack at the supermarket, what is the probability that the mean weight of the papayas is between 1.0 kg and 1.4 kg? State any assumption needed. Explain why this probability is the same as or different from that in part (i).

   (iii) A random sample of 5 papayas is selected. Suppose the probability is at least 0.9 that the variance of the weights of the papayas in the sample is less than p. Find the range of p. State any assumption needed.

   (15 Marks)

Note: Question No. 1 continues on page 2.

ATTENTION: The Singapore Copyright Act applies to the use of this document. Nanyang Technological University Library

(b) A food factory is planning to manufacture fish balls. The factory has just bought the machine that will be used to produce the fish balls. The machine is set to have the standard diameter of a fish ball as $d^* = 2.0$ cm. If the actual diameter is slightly smaller, the profit margin of the factory will improve. To test the machine, a random sample of 41 fish balls is collected and the mean diameter is found to be 1.99 cm with standard deviation of 0.02 cm. Can the factory conclude from the sample that the machine improves the profit margin at $\alpha = 5\%$? What would be the range of the standard diameter d^* in order to keep the same conclusion obtained?

(10 Marks)

2 (a) Let X be a random variable modelling the weight (in kg) of a species of animal during its life cycle. X has the following probability density function

$$f(x) = \begin{cases} \sqrt{x} + ax, & 0 \le x \le 1 \\ x + a + b(x-1)^2, & 1 \le x \le 2 \\ 0, & \text{otherwise} \end{cases}$$

where a and b are constants. The probability that the weight of an animal exceeds 3/2 kg is 1/4 . Find a and b. Hence, find the value of $E(2X - 1)$ correct to 3 decimal places.

(12 Marks)

(b) The weights of newborn babies can be modelled by a normal distribution with mean 3.1 kg and standard deviation 0.3 kg. A newborn baby is classified as **overweight** if its weight is above 4.1 kg, and **underweight** if its weight is below 2.3 kg.

(i) Ali is the first baby born in the year 2025 and he is of normal weight at birth (neither overweight nor underweight). What is the probability that Ali's weight at birth is above 3 kg?

(ii) Find the minimum w such that at least 70% of newborn babies weigh below w kg.

(13 Marks)

3 Consider the following ODE

$$y'' + 2y' + y = 2u(t)$$

with the initial conditions of $y'(0) = 1$ and $y(0) = 0$.

(a) Use Laplace transform method to find the solution $y(t)$.

(15 marks)

(b) Use **improved** Euler method to approximate $y(0.2)$, assuming $h = 0.1$.

(10 marks)

4 (a) Solve the following PDE using direct integration method

$$u_{xy} = x^2 + x\cos(y)$$

Assuming $u(x, 0) = x$ and $u(0, y) = 0$.

(12 Marks)

(b) Using separation of variables, solve the following PDE

$$u_t = u_{xx}$$

with the initial condition of $u(x, 0) = \cos(4x)$

(13 Marks)

Appendix A

Total Probability of A

$$P(A) = \sum_{j=1}^{k} P(A \mid B_j) P(B_j)$$

Bayes Theorem

$$P(B_r \mid A) = \frac{P(A \mid B_r) P(B_r)}{\sum_{j=1}^{k} P(A \mid B_j) P(B_j)}$$

Poisson Distribution

$$P(X = k) = \frac{e^{-\lambda} \lambda^k}{k!}$$

Binomial Distribution

$$P(X = k) = \binom{n}{k} p^k (1-p)^{n-k}$$

Fixed-Point Iteration Method

$$x_{n+1} = g(x_n), \quad n = 0, 1, 2, \ldots$$

Euler Method

$$y_{n+1} = y_n + hf(x_n, y_n)$$

Improved Euler Method (Heun's Method)

$$a = hf(x_n, y_n)$$
$$b = hf(x_{n+1}, y_n + a)$$
$$y_{n+1} = y_n + \tfrac{1}{2}(a + b)$$

ATTENTION: The Singapore Copyright Act applies to the use of this document. Nanyang Technological University Library

Appendix A (Continued)

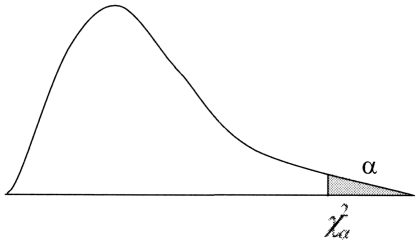

Runge-Kutta Method

$$a = h f(x_n, y_n)$$
$$b = h f(x_n + \tfrac{1}{2}h, y_n + \tfrac{1}{2}a)$$
$$c = h f(x_n + \tfrac{1}{2}h, y_n + \tfrac{1}{2}b)$$
$$d = h f(x_n + h, y_n + c)$$
$$y_{n+1} = y_n + \tfrac{1}{6}(a + 2b + 2c + d)$$

Laplace Transform Table

		$f(t)$	$F(s)$
1.	Unit impulse	$\delta(t)$	1
2.	Unit step	$u(t)$	$\frac{1}{s}$
3.	Unit ramp	$r(t) = tu(t)$	$\frac{1}{s^2}$
4.	Unit parabola	$p(t) = \frac{1}{2}t^2u(t)$	$\frac{1}{s^3}$
5.	Exponential	e^{-at}	$\frac{1}{s+a}$
6.	t-Multiplication exponential	te^{-at}	$\frac{1}{(s+a)^2}$
7.	Sine	$\sin \omega t$	$\frac{\omega}{s^2+\omega^2}$
8.	Cosine	$\cos \omega t$	$\frac{s}{s^2+\omega^2}$
9.	Damped Sine	$e^{-at}\sin \omega t$	$\frac{\omega}{(s+a)^2+\omega^2}$
10.	Damped Cosine	$e^{-at}\cos \omega t$	$\frac{s+a}{(s+a)^2+\omega^2}$
11.	Linearity	$c_1f_1(t)+c_2f_2(t)$	$c_1F_1(s)+c_2F_2(s)$
12.	Differentiation	$\frac{d}{dt}f(t)$	$sF(s)-f(0)$
13.	n-Fold differentiation	$\frac{d^n}{dt^n}f(t)$	$s^nF(s)-s^{n-1}f(0)-s^{n-2}f'(0)$ $-\cdots\cdots-sf^{(n-2)}(0)-f^{(n-1)}(0)$
14.	Integration	$\int_{0-}^{t} f(\tau)d\tau$	$\frac{F(s)}{s}$
15.	t-Multiplication	$tf(t)$	$\frac{-d}{ds}F(s)$

Note: Laplace Transform Table continues on page 12.

Laplace Transform Table (Continued)

	$f(t)$	$F(s)$
16. n-Fold t-Multiplication	$t^n f(t)$	$(-1)^n \frac{d^n}{ds^n} F(s)$
17. Time shift	$f(t-t_0)u(t-t_0)$; $t_0 > 0$	$e^{-st_0} F(s)$
18. Frequency shift	$e^{-s_0 t} f(t)$	$F(s+s_0)$
19. Time-frequency scaling	$f(ct)$; $c > 0$	$\frac{1}{c} F\left(\frac{s}{c}\right)$
20. Periodic Function	$f(t) = f_1(t)u(t) + f_1(t-T)u(t-T) + f_1(t-2T)u(t-2T) + \cdots$	$\frac{1}{1-e^{-sT}} F_1(s)$

IE2106 ENGINEERING MATHEMATICS I

Please read the following instructions carefully:

1. **Please do not turn over the question paper until you are told to do so. Disciplinary action may be taken against you if you do so.**

2. You are not allowed to leave the examination hall unless accompanied by an invigilator. You may raise your hand if you need to communicate with the invigilator.

3. Please write your Matriculation Number on the front of the answer book.

4. Please indicate clearly in the answer book (at the appropriate place) if you are continuing the answer to a question elsewhere in the book.
